UniFlow Pitch Script

UniFlow — Script de présentation (10 min, en anglais)

KERNEL FORGE · Orion Hackathon

Phrases en anglais = à dire. Notes entre [ ] en français = pour toi.

OUVERTURE (AVANT SLIDE 1, OU EN MONTRANT SLIDE 1) — ~45 SEC

> *"Good morning, everyone. Thank you for having us. We are **KERNEL FORGE**, a student team from the **University of Yaoundé I**, and today we're presenting **UniFlow** — a smart, modular, offline-first platform built to run a university even when the network and the power go down."*

[Souris, regarde le jury, pas l'écran. Marque une pause après "UniFlow".]

SLIDE 2 — THE PROBLEM — ~1 MIN 15

> *"Before talking about the solution, let's talk about the reality on the ground. In Cameroon, power cuts last **six to eight hours a day** in many neighborhoods. Only **41.9%** of the population has internet access. Our own university, UY1, has **almost 48,000 students** — some lecture halls built for 500 now hold six times that. This isn't a hypothesis. We collected two real, documented cases: a former student who spent years retracing his own academic record on paper — and students who walk to the lecture hall every evening just to sit near the generator and get light."*

[Pointe les 4 chiffres avec la main, ne les lis pas un par un — dis-les de mémoire.]

SLIDE 3 — THE SOLUTION — ~1 MIN 15

> *“UniFlow is a general-purpose, modular, open-source university management platform. And I want to be clear: this is **not a Western product adapted for Africa** — it was designed for this reality from day one. But our ambition goes further than a digital campus. We want UniFlow to become a **smart, interactive campus** — powered by AI and connected IoT modules, like the Vigie extension you’ll see in a moment. The key differentiator today is **offline-first**. We use a local queue — an Outbox pattern — so UniFlow keeps working through outages and syncs automatically once connection comes back. No direct competitor handles this natively. On top of that: enrollment management, smart auto-adjusting timetables, QR-code attendance, real-time communication, and full academic analytics.”*

[Appuie fort sur “offline-first” ET sur “smart, interactive campus” — tes deux mots-clés de toute la présentation.]

SLIDE 4 — THE MARKET — ~40 SEC

> *“The opportunity is significant. Sub-Saharan Africa has about **9 million** higher-education students, but the enrollment rate is only 9%, against 43% worldwide — that gap is our opportunity. Cameroon alone has **700,000** students. Our starting point, UY1, has **47,952** — our launch pilot.”*

[Va vite, c’est un slide visuel — laisse les chiffres parler.]

SLIDE 5 — THE PRODUCT: SENTINELLE — ~1 MIN

> *“We also went beyond software. This is where UniFlow becomes a **smart, interactive campus**: **UniFlow Sentinelle** extends the platform down to the physical layer, using low-cost Raspberry Pi hardware instead of expensive servers. The **Health module** is a pre-diagnosis kiosk with connected medical sensors and a triage AI. The **Vigie module** does AI fall and anomaly detection at the edge — even offline. And here’s the part we’re proud of: the two modules talk to each other. A fall detected by Vigie **automatically triggers** Health’s emergency protocol — no one has to run to a kiosk.”*

[C’est ton “wow moment” — ralentis sur la dernière phrase, laisse-la respirer.]

SLIDE 6 — VALIDATION & TRACTION — ~45 SEC

> *“This isn’t just an idea on paper. We’ve been shortlisted for Phase 2 of Orion Hackathon Global 2026. We have a complete technical specification, a team of 8 developers already building, and a live demo you can see today. Our roadmap: V1 in months 1 to 6 covers the academic core and offline sync. V2 adds exams and the Sentinelle pilot. V3 brings predictive AI and regional expansion.”*

[Insiste sur “live demo you can see today” — ça rassure le jury que ce n’est pas que des slides.]

SLIDE 7 — TEAM — ~30 SEC

> *"Behind this: eight engineers — four on frontend, three on backend and database, and one lead architect — all from the same university we're building for."*

[Vite. Ne nomme pas tout le monde un par un, le slide le montre déjà.]

SLIDE 8 — COMPETITION — ~50 SEC

> *"Existing academic ERPs — SIGES, Moodle, Western solutions — assume a stable network and hard-currency budgets. Two conditions that are rarely met here. Most of them stop working at the first outage. They bill in dollars or euros. UniFlow was designed offline-first and low-cost from the ground up — open source, and billed in FCFA, at **100 FCFA per user per month**."*

[Le contraste gauche/droite du slide fait le travail visuel — toi, insiste sur le prix en FCFA, c'est concret pour le jury local.]

SLIDE 9 & 10 — NUMBERS & THE ASK — ~1 MIN

> *"Our development cost is minimal — around 1,500 to 2,000 hours of work, and just 37 to 126 dollars a month in infrastructure once in production. We're targeting 50,000 active users in year one with the UY1 pilot, 250,000 in year two as we extend to more state universities, and over a million in year three with regional expansion. What we're asking for: **seed funding** to cover infrastructure and development through the UY1 pilot, an **institutional partnership** with the University of Yaoundé I, and **mentorship** to structure the project beyond this hackathon. Our estimated seed budget is 1.5 to 8 million FCFA."*

[Dis le chiffre du budget lentement et clairement — c'est LA phrase que le jury retient.]

SLIDE 13 — CLÔTURE — ~40 SEC

> *"UniFlow is built to work locally first, and sync later — centralizing academic, administrative, and educational management for a university, open source, and resilient to the outages that are a daily reality here. Tested first at the University of Yaoundé I, built for universities across Africa. The platform will be demonstrated live at **uniflow.kernelforge.codes** right after this. Thank you for your attention. We're KERNEL FORGE, and we're happy to take your questions."*

[Termine en souriant, regarde le jury, pas l'écran. Silence 1 seconde avant de dire "Thank you" — ça donne du poids.]

SLIDES 11 & 12 — EN RÉSERVE (PAS DANS LES 10 MIN)

Ne les présente pas — garde-les pour répondre si le jury demande :

- **Modèle économique en détail** → Slide 11 (gratuit jusqu'à septembre, puis 100 FCFA/mois individuel ou abonnement université)
- **Partenariats en détail** → Slide 12 (GDG, UnsaidTalks, UY1 comme partenaire cible)

REPÈRES DE TIMING (À GARDER EN TÊTE)

Fin de…	Temps écoulé
Ouverture + Slide 2	~2:00
Slide 3	~3:15
Slide 4	~3:55
Slide 5	~4:55
Slide 6	~5:40
Slide 7	~6:10
Slide 8	~7:00
Slides 9-10	~8:00
Clôture	~8:40
Buffer restant	**~1:20**
